APPLICANT : MATSUSHITA ELECTRIC IND CO LTD;

INVENTOR : HAMAMOTO MASAO;

INT.CL. : D06F 58/04

TITLE : LID BODY FOR CLOTHES DRYER

ABSTRACT : PURPOSE: To make the weight lighter, reduce the assembly man-hour and improve the design properties by a method wherein a window glass is fixed by a holding member on the back side of a resin lid, and on the resin lid, a transparent top lid is fitted in an opening, and engaging holes which are formed on the peripheral wall of the top lid are engaged with protrusions which are projected on the inner periphery of the opening.

CONSTITUTION: A lid body 5 has a rib on the inside of a resin lid 6, and on this rib, a window supporting part 7 and attaching hole 8 are provided. A window glass 13 is fitted on the window supporting part 7 of the resin lid 6, and fixed to the resin lid 6 through a holding member 14 by a screw 15, and from the front side of the lid body 5, a transparent top lid 17 is pressed in, and a protrusion 12 on the opening of the resin lid 6 is fitted in an engaging hole 16 which is provided on the peripheral wall of the top lid to fix the top lid. By this method, the resin lid 6 and top lid 17 can be made of resin, and the weights can be made lighter. Also, the attaching structures of the top lid 17 and window glass 13 can be simplified, and the assembly man-hour can be reduced, and the appearance and safety are improved.
